

New Features

- A new light interface has been created and can be activated by going to Configuration → Invoice → Interface tab and selecting the Limited Interface option.

Improvements

- It is now possible to assign the cost of a supplier purchase from the PriceCharting integration data window.

Fixes

- The discount fields in the discount selection window have been adjusted for better usability.
- An issue where the tax number would not display properly if it was too long has been corrected.
- Bigger invoices can now be finalized.
- The issue where deposit amounts would not display properly in the GL reports has been corrected.
- The issue with canceled invoices not balancing correctly in the GL reports has been resolved.
- The CSV export for the Items Sold (Simplified) report has been corrected and now displays properly.
