

New Features

- It's now possible to transfer purchased bundles to the network.

New Configurations

- The UPC column will now adjust dynamically to the UPC length with the new option in Configuration -> Invoice -> Page 4, search section.
- There is a new option to use the product's cost when doing a forced refund.
- Option added that allows a default UPC to be locked for the system.
- It's now possible to set contact and company information types as searchable fields in the Invoice module.
- There's a new option to display or hide UPC types and attribute types in the product information panel in the Invoice module.
- There's a new option to make Master or SubMaster promotions editable locally.
- There are a new option and a new action on right-click to receive all quantities of a supplier order.

Fixes

- Membership discounts for the quantity of products are not calculated properly when finalizing an order.
- Cloned entity type promotions now set the entity type properly when no type is selected.
