

Release Notes

Version: 4620000

Bug Fix: The cause of an error when opening the credit adjustment window for companies has been identified and fixed.

Fix: Corrected a rare issue where a sold inventory unit was created when the "Automatically make a no inventory sale" option is active and an attempt is made to sell a product over its current stock then changed back to its current stock level.

Improvement: The option to automatically disassemble packages on reception can now be extended to disassemble ALL of the receives packages instead of only one when multiple packages are received. The behaviour of the existing option remains the same, it's a new option that can extend it. The description of the existing option has been clarified to more better represent its scope.

New feature: An option has been added to disable the invoice's advisor selector which will be set and locked to the user of the current session. To maintain current behaviour it is not enabled by default.

Fix: A synchronization issue for networked gift cards has been identified and fixed.

New Integration: Alice POS is now integrated with the Moneris Cloud payment solution.

New Feature: A flag has been added to Contacts and Companies so they can be excluded from receiving rewards points.
